

Contact List Application

QUICK START GUIDE

MySQL Configuration:

User: root

Password : toor.

Check Readme.txt for installation and configuration instructions.

Contact List Application Quick Start Guide:

1. Open mysql console in the terminal by running `mysql -u root -p toor`, run `source init` to create the tables.
2. Open another terminal and run `python __init__.py`
3. Open your preferred browser and open <https://127.0.0.1:5000>
4. This will lead you to the homepage of the application.
5. Under Global Search there is search bar in which you can search all the four tables, this will return the number of hits and rows matching the keyword.
6. Under Contact List there is a search bar which searches only for the Contact table, "Add" button is used to insert data into the Contact tables.
7. Under Address List there is a search bar which searches only for the Address table, "Add" button is used to insert data into the Address tables.
8. Under Phone List there is a search bar which searches only for the Phone table, "Add" button is used to insert data into the Phone tables.
9. Under Date List there is a search bar which searches only for the Date table, "Add" button is used to insert data into the Date tables.
10. Each List has a column called action which has two buttons "Edit" and "Delete", which is used for editing and deleting the row.
11. Pressing any of the buttons opens a form to be filled to modify or add data into the table.
